TEACHING

PHYS 3727: *Advanced Electricity & Magnetism* Fall 2024
The course covered advanced topics in electromagnetic theory and their applications, and was largely based on Chapters 1-6, 8, and 14 of *Classical Electromagnetic Radiation* by M.A. Heald and J.B. Marion. The students were at the junior/senior level.

PHYS 7636: *Solid-State Physics II* Spring 2024
Course contents based on the material developed previously for PHYS 7687 in Fall 2020. The course covered advanced topics in quantum many-body physics (see below).

PHYS 3727: *Advanced Electricity & Magnetism* Fall 2023
Similar to Fall 2024.

PHYS 7636: *Solid-State Physics II* Spring 2023
Similar to the contents from Fall 2020.

Phys 2218: *Physics III: Waves & Thermal Physics* Spring 2022
Approximately two-thirds of the course covered a variety of wave phenomena, based largely on *The Physics of Waves* by H. Georgi, and *Vibrations and Waves* by A.P. French. The remaining one-third of the course covered introductory topics in thermal physics based on *An Introduction to Thermal Physics* by D.V. Schroeder. The students were at the sophomore level.

Phys 4230: *Statistical Thermodynamics* Fall 2021
The course discussed basics of statistical mechanics and its connection to thermodynamics. The topics covered included an introduction to entropy, ensembles, and notion of ergodicity, and its applications to thermodynamics, quantum gases, and phase transitions. The students were at the junior and senior level.

AS 1102: *Arts & Sciences Advising Seminar* Fall 2021
Advising seminar for Arts & Sciences first year undergraduate students at Cornell. Led several discussion sessions and individual meetings throughout the semester to help the students get oriented at Cornell, and introduced them to some basic ideas related to quantum materials research.

Phys 6574: *Applications of Quantum Mechanics II* Spring 2021
The topics covered included time-dependent perturbation theory, scattering theory, quantization of the electromagnetic field, quantum statistics, and many-particle quantum mechanics. The materials were inspired in part by the textbooks *Modern Quantum Mechanics* by J.J. Sakurai and J. Napolitano, and *Lectures on Quantum Mechanics* by S. Weinberg.

Phys 7687: *Strongly Correlated Phases of Quantum Matter* Fall 2020
The topics covered included Fermi liquid theory, Boltzmann equation and collective modes, Superconductivity, Superfluidity in weakly interacting bosonic liquids, Mott insulators and quantum magnetism, Quantum spin liquids, Kondo effect, Non-Fermi liquids. I designed the course materials, taking inspiration from a variety of modern textbooks on the topic of quantum many-body systems.

Phys 4490: *Independent Study in Physics* Fall 2020
I advised a Physics sophomore on a short research project on the collective synchronization dynamics of coupled non-linear oscillators.

Phys 2208: *Fundamentals of Physics II* Spring 2020
Supporting staff member. Led discussion section and assisted with course logistics.
